Introduction

This course is required for all individuals involved in the planning, execution, and monitoring of Public-Private Partnership (PPP) projects in the road division.

It provides the participants with all of the tools they need to prepare projects that will be appealing to the private sector, enable fair risk sharing, and ensure revenue inflows appropriate for the attractiveness of the property and the sustainability of the cash flow.

National, regional, and municipal governments face challenges in filling the gap between budget and public desires in all infrastructure divisions; this is a common denominator for both advanced and developing countries.

As a result of the need to close the budget gap, Public-Private Partnerships were formed (PPP).

They were carried out with varying degrees of success in various countries, and this course is intended to assist in avoiding mistakes, reducing risks, and developing satisfaction from both public and private perspectives.

This course will highlight:

- Public-Private Partnership (PPP) Principles and Structure
- How to choose and serve projects attractive for both public and private entities
- The best exercises in Public-Private Partnership (PPP) financing
- The leadership of risk management and risk allocation in Public-Private Partnership (PPP)
- How to outfit and implement the contracts
- How to fulfil the project management in Public-Private Partnership (PPP)
- Impact of political, financial, and other fluctuations and their resolution
