Date	Venue	Duration
20 - 24 Dec 2026	**Manama (Bahrain)**	**1 Week**
Fee	Ref	Language
£3,650 GBP	**BA20**	**English**

Introduction

It is critical to explain the nature/costs of risk, the design and scope of social insurance, the point at which private insurance takes over, and the balance between preserving disadvantaged people, affordability, equity to taxpayers, considerations to keep, risk avoidance, reduction, and transference, the requirements of the profession, asset creation, and support product design.

Within the spectrum of risks, there are those that cannot be protected against due to their contingent and irregular force, and others that, due to cost, make it difficult for many to allow the awards (57% of Americans do not earn enough to pay income tax, and many others in the UK and Europe also earn very little). This is where social insurance comes in.

Individuals, insurance professionals, and other professionals involved in tax, pensions, health and unemployment provisions, actuaries, and risk consultants must all recognise the appropriate balance of private and public sector social insurance terms that provides intergenerational honesty, fairness to taxpayers, disaster mitigation for the disadvantaged, and incentives to work, business, and save.

Sensible financial and risk management, as well as social insurance policy-making, require trust in a privately funded provision to be most prominent within the organisations most capable of providing it, with social insurance holding up a greater symmetry of stability for those genuinely incapable of implementing for themselves.

Recognising where one set of equipment ends, income sharing/preservation proportions and demographic trends determine the type of private insurance preparation and its purpose, whereas risks organise underwriting and claims policies.

This training course on the role of Social Insurance and Risk Management will highlight:

- How and Why Social Insurance Came Into Being, Its Nature, Purpose, and Limitations
- The Main Social Insurance Programmes and Their Advantages and Aims
- Risk / Danger Management By Individuals

- Risks To Businesses / Other Institutions / Risk Management Processes and Frameworks
