Introduction

Many organisations around the world have used the ISO9001 quality management system standard as a framework for managing quality assurance within their operations and meeting their customers' expectations. They must have reaped the benefits of this structured approach to risk and opportunity management in their business.

Quality Assurance in Practice will give delegates a solid understanding of how to develop quality assurance in their organisations in a practical manner. The well-known ISO9001 framework is examined as a foundation for developing quality assurance in this Management & Leadership training course. This Quality Assurance in Practice training course continues by emphasising the significance of risk-based thinking, the PDCA approach, and thus the process approach. Furthermore, this training course delves into other critical aspects of developing a high-quality management system, such as the role of audit in organisational improvement and the development of document control to support your system, which are covered during this highly practical and participative training course.

Course Objectives of Quality Assurance in Practice

By the top of this training course, delegates are going to be able to:
